AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A mobile telephone comprising:

main display means and auxiliary display means; and

control means for executing processing based upon a program that has been stored in said mobile telephone to thereby implement a plurality of functions;

wherein display content that is the result of processing by the same function is displayed on both said main display means and said auxiliary display means, and

wherein said control means exercises control so as to assign priorities to the plurality of functions separately for each of said main and auxiliary display means, thereby managing functions that process display content displayed on said main and auxiliary display means.

2. (currently amended): The mobile telephone according to claim 1, wherein said control means exercises control so as to:

~~assign priorities to the plurality of functions separately for each of said main and auxiliary display means, thereby managing functions that process display content displayed on said main and auxiliary display means; and~~

present displays in order starting from display content that has been processed by a function having the highest priority.

2

3. (original): The mobile telephone according to claim 2, further comprising auxiliary operation input means capable of selecting a function that processes display content displayed on said auxiliary display means;

wherein said control means exercises control in such a manner that if a function is selected by said auxiliary operation input means, the priority of this selected function for display on said main display means is changed to the highest priority and display content that has been processed by this selected function is displayed also on said main display means.

4. (original): The mobile telephone according to claim 3, wherein said control means exercises control so as to count, for each of the plurality of functions, the number of times the function has been selected by said auxiliary operation input means, and change the priority for presentation of displays on the auxiliary display means in accordance with the number of times the function has been selected.

5. (original): The mobile telephone according to claim 3, wherein said control means exercises control so as to measure, for each of the plurality of functions, display time during which display content that has been processed by the function is displayed on said auxiliary display means, and change the priority for presentation of displays on the auxiliary display means in accordance with the display time measured.

6. (original): The mobile telephone according to claim 4, wherein said control means exercises control so as to:

count, for each of the plurality of functions, the number of times the function has been selected by said auxiliary operation input means; and

3

if a function is selected by said auxiliary operation input means, count the selected

function, change the priority of this selected function for display on said auxiliary display means

to the highest priority and assign the priorities of the other functions in accordance with the

number of times the function has been selected.

7. (original): The mobile telephone according to claim 5, wherein said control means exercises

control so as to:

measure, for each of the plurality of functions, display time during which display content

that has been processed by the function is displayed on said auxiliary display means; and

if a function is selected by said auxiliary operation input means, change the priority of

this selected function for display on said auxiliary display means to the highest priority and

assign the priorities of the other functions in accordance with the display time measured.

8. (original): The mobile telephone according to claim 4, further comprising main operation

input means capable of selecting a function that processes display content displayed on said main

display means;

wherein said control means exercises control so as to:

count, for each of the plurality of functions, the number of times the function has been

selected by said main operation input means; and

if a function is selected by said main operation input means, change the priority of this

selected function for display on said auxiliary display means to the highest priority and assign

the priorities of the other functions in accordance with the number of times the function has been

selected.

9. (original): The mobile telephone according to claim 5, further comprising main operation

input means capable of selecting a function that processes display content displayed on said main

display means;

wherein said control means exercises control so as to:

measure, for each of the plurality of functions, measure, display time during which

display content that has been processed by the function is displayed on said auxiliary display

means; and

if a function is selected by said main operation input means, change the priority of this

selected function for display on said auxiliary display means to the highest priority and assign

the priorities of the other functions in accordance with the display time measured.

10. (currently amended): A method of controlling display on a mobile telephone having main

display means, auxiliary display means and control means for executing processing based upon a

program that has been stored in said mobile telephone to thereby implement a plurality of

functions, said method comprising a control step of exercising control in such a manner that

display content that is the result of processing by the same function is displayed on both the main

display means and the auxiliary display means,

wherein said control step includes a step of exercising control so as to assign priorities to

the plurality of functions separately for each of the main and auxiliary display means, thereby

managing functions that process display content displayed on the main and auxiliary display

means.

11. (currently amended): The method according to claim 10, wherein said control step includes

a step of exercising control so as to:

~~assign priorities to the plurality of functions separately for each of the main and auxiliary~~

~~display means, thereby managing functions that process display content displayed on the main~~

~~and auxiliary display means; and~~

present displays in order starting from display content that has been processed by a

function having the highest priority.

12. (original): The method according to claim 11, wherein said control step includes a step of

exercising control in such a manner that if a function that processes display content displayed on

the auxiliary display means is selected by input means, the priority of this selected function for

display on the main display means is changed to the highest priority and display content that has

been processed by this selected function is displayed also on the main display means.

13. (original): The method according to claim 12, wherein said control step includes a step of

exercising control so as to count, for each of the plurality of functions, the number of times the

function has been selected by the input means, and change the priority for presentation of

displays on the auxiliary display means in accordance with the number of times the function has

been selected.

14. (original): The method according to claim 12, wherein said control step includes a step of

exercising control so as to measure, for each of the plurality of functions, display time during

which display content that has been processed by the function is displayed on the auxiliary

display means, and change the priority for presentation of displays on the auxiliary display

means in accordance with the display time measured.

15. (original): The method according to claim 13, wherein said control step includes a step of

exercising control so as to:

count, for each of the plurality of functions, the number of times the function has been

selected by the input means; and

if a function is selected by the input means, count the selected function, change the

priority of this selected function for display on the auxiliary display means to the highest priority

and assign the priorities of the other functions in accordance with the number of times the

function has been selected.

16. (original): The method according to claim 14, wherein said control step includes a step of

exercising control so as to:

measure, for each of the plurality of functions, display time during which display content

that has been processed by the function is displayed on the auxiliary display means; and

if a function is selected by the input means, change the priority of this selected function

for display on the auxiliary display means to the highest priority and assign the priorities of the

other functions in accordance with the display time measured.

17. (original): The method according to claim 13, wherein said control step includes a step of

exercising control so as to:

count, for each of the plurality of functions, the number of times a function that processes

display content displayed on the auxiliary display means has been selected; and

if a function that processes display content displayed on the main display means is selected, change the priority of this selected function for display on the auxiliary display means to the highest priority and assign the priorities of the other functions in accordance with the number of times the function has been selected.

18. (original): The method according to claim 14, wherein said control step includes a step of exercising control so as to:

measure, for each of the plurality of functions, display time during which display content that has been processed by the function is displayed on the auxiliary display means; and

if a function that processes display content displayed on the main display means is selected, change the priority of this selected function for display on the auxiliary display means to the highest priority and assign the priorities of the other functions in accordance with the display time measured.

19. (currently amended): A display control program for controlling display on a mobile telephone having main display means, auxiliary display means and control means for executing processing based upon a program that has been stored in said mobile telephone to thereby implement a plurality of functions, said display control program implementing control in such a manner that display content that is the result of processing by the same function is displayed on both the main display means and the auxiliary display means,

wherein said program includes program code for implementing control so as to assign priorities to the plurality of functions separately for each of the main and auxiliary display

8

means, thereby managing functions that process display content displayed on the main and auxiliary display means.

20. (currently amended): The program according to claim 19, wherein said program includes program code for implementing control so as to:

~~assign priorities to the plurality of functions separately for each of the main and auxiliary display means, thereby managing functions that process display content displayed on the main and auxiliary display means; and~~

present displays in order starting from display content that has been processed by a function having the highest priority.

21. (original): The program according to claim 20, wherein said program includes program code for implementing control in such a manner that if a function that processes display content displayed on the auxiliary display means is selected by input means, the priority of this selected function for display on the main display means is changed to the highest priority and display content that has been processed by this selected function is displayed also on the main display means.

22. (original): The program according to claim 21, wherein said program includes program code for implementing control so as to count, for each of the plurality of functions, the number of times the function has been selected by the input means, and change the priority for presentation of displays on the auxiliary display means in accordance with the number of times the function has been selected.

23. (original): The program according to claim 21, wherein said program includes program code for implementing control so as to measure, for each of the plurality of functions, display time during which display content that has been processed by the function is displayed on the auxiliary display means, and change the priority for presentation of displays on the auxiliary display means in accordance with the display time measured.

24. (original): The program according to claim 22, wherein said program includes program code for implementing control so as to:

count, for each of the plurality of functions, the number of times the function has been selected by the input means; and

if a function is selected by the input means, count the selected function, change the priority of this selected function for display on the auxiliary display means to the highest priority and assign the priorities of the other functions in accordance with the number of times the function has been selected.

25. (original): The program according to claim 23, wherein said program includes program code for implementing control so as to:

measure, for each of the plurality of functions, display time during which display content that has been processed by the function is displayed on the auxiliary display means; and

if a function is selected by the input means, change the priority of this selected function for display on the auxiliary display means to the highest priority and assign the priorities of the other functions in accordance with the display time measured.

26. (original): The program according to claim 22, wherein said program includes program code for implementing control so as to:

count, for each of the plurality of functions, the number of times a function that processes display content displayed on the auxiliary display means has been selected; and

if a function that processes display content displayed on the main display means is selected, change the priority of this selected function for display on the auxiliary display means to the highest priority and assign the priorities of the other functions in accordance with the number of times the function has been selected.

27. (original): The program according to claim 23, wherein said program includes program code for implementing control so as to:

measure, for each of the plurality of functions, display time during which display content that has been processed by the function is displayed on the auxiliary display means; and

if a function that processes display content displayed on the main display means is selected, change the priority of this selected function for display on the auxiliary display means to the highest priority and assign the priorities of the other functions in accordance with the display time measured.
